Evolent Health - Project exercise for Application Development Positions

Project Description:
Design and implement a production ready application for maintaining contact information. Please choose the frameworks, packages and/or technologies that best suit the requirements.

Expected functionality:
- add a contact
- list contacts
- edit contact
- delete contact

Required Contact model:
- First Name
- Last Name
- Email
- Phone Number
- Status (Possible values: Active/Inactive)

Please upload to a public GitHub repository, create README instructions, host the project if feasible and send us the project link(s). Time is not a factor, we are looking for good software design practices and coding standards.

From the below please choose the appropriate requirement for the position you are applying for.

.NET Software Engineer (All levels)
Design and implement a .NET REST api with appropriate data storage solution for the defined project.

JavaScript Software Engineers (All levels)
Design and implement a SPA for the defined project.
